

CANINE EARLY DETECTION PROGRAMS	Young Adult Ages 1 - 6	Mature Ages 7+
Comprehensive Physical Exam	1	2
Complete Chemistry Profile and Blood Count		
Adult Chemistry Profile and Standard Blood Count		
Fecal Analysis		
Heartworm & Tick Bourne Infection Screening		
Thyroid Test		
Complete Urinalysis		
Core Vaccines		
Schirmer Test & Blood Pressure Screening		
Bag of Lean Treats & Initial Nail Trim		
DISCOUNTED COST WHEN BUNDLING AS PREVENTATIVE PACKAGE	\$219 (Savings of \$115)	\$318 (Savings of \$168)

<p><b>COMPREHENSIVE PHYSICAL EXAM</b> Still the <i>most important aspect</i> of preventive care. This allows us to assess body condition, joint function, hair coat, heart, lungs, ears, eyes, thyroid, teeth, lymph nodes and skin masses or ulcerations. Annual exams are recommended for all pets to detect problems they “hide” from their owners. More frequent exams may be needed if your pet is ill or injured.</p>	<p><b>ADULT CHEMISTRY PROFILE AND STANDARD BLOOD COUNT</b> used to assess the function of the liver, kidneys, pancreas, and other body systems. It also helps in the diagnosis of infection, cancer, anemia, and bleeding disorders. This test will provide insight into the status of your pet’s immune system and gives us a “baseline” for future comparison. Blood values show changes long before your pet shows signs and early detection allows early and more effective treatment.</p>
<p><b>HEARTWORM TESTING</b> The Heartworm Society recommends yearly heartworm testing for dogs and cats (even those on prevention). This ensures your pet is free from this deadly parasite. It also allows early detection (before your pet shows signs) and treatment should your pet contract the parasite.</p> <p><b>TICK BORNE BACTERIAL INFECTIONS</b> (Lyme, ehrlichia, and anaplasma) even an unseen tick can transmit these debilitating diseases. Early detection allows more success with treatment.</p>	<p><b>COMPLETE CHEMISTRY PROFILE AND BLOOD COUNT</b> used to assess the function of the liver, kidneys, pancreas, and other body systems such as electrolyte balance. It also helps in the diagnosis of infection, cancer, anemia, and bleeding disorders. This test will provide insight into the status of your pet’s immune system and gives us a “baseline” for future comparison. Blood values show changes long before your pet shows signs and early detection allows early and more effective treatment.</p>
<p><b>THYROID TEST (T<sub>4</sub>)</b> measures levels of thyroid hormone, commonly decreased in older dogs. Early diagnosis will allow early treatment which can help your pet avoid increased weight, skin problems, and decreased energy.</p>	<p><b>COMPLETE URINALYSIS</b> a urine sample is checked for evidence of infection or diabetes and it also helps assess kidney function. If kidney disease or diabetes are detected early, treatment is more effective and less expensive.</p>
<p><b>FECAL ANALYSIS</b> Important in all pets (even those that are indoor only) as parasites or bacterial infections can cause serious, but treatable diseases. Many of these parasites are transmissible to people too. Fecal parasites can be transmitted by insects, rodents, or just a simple stroll through the yard.</p>	<p><b>CORE VACCINES</b> include Distemper, Leptospirosis, Bordetella, and Rabies.</p> <p>*For the health and safety of your pet, the Distemper and Leptospirosis vaccines must be given with an exam.</p>
<p><b>SCHIRMER TEAR TEST</b> is a tear production test, performed to make sure that enough tears are being made to moisten and nourish the surface of the eye and cleanse the eyes of foreign particles. Decreased tear production is a common cause of blindness in older dogs.</p>	<p><b>BLOOD PRESSURE MONITORING</b> High blood pressure can cause blindness, “strokes”, and damage to the heart and kidneys. It can also indicate an underlying, but treatable disease process.</p>

**ADDITIONAL EARLY DETECTION DISCOUNTS AVAILABLE**

To encourage proper preventive dental care for your pet, participants in the Early Detection Program receive a **15% discount on a dental cleaning** (scale and polish teeth under anesthesia). This does not apply to special dental work if needed, such as extractions or periodontal antibiotic therapy. Your veterinarian will help guide you on your pet’s dental health needs for at home care or a professional cleaning if needed.

You may also take advantage of additional **\$5 discounts** on 1-year supplies of internal and external parasite preventives and **MICROCHIPPING**.

**All discounts and services are good for up to 10 months from purchase of package.**
